IMRANKHAN GHORI

AI developer with strong foundations in Machine Learning and intelligent systems, committed to solving real-world problems through innovative technology.

Education/Certifications

- B.E in Artificial Intelligence and Data Science. from SG Balekundri Institute of Technology Belagavi, Karnataka
  2022-2026

Certification Courses

- Artificial Intelligence and Machine Learning at Skillzam
- C, C++ Certification | Media Industrial Training Center

Core Competencies

- Machine Learning & Deep Learning
- Predictive Modeling & Statistical Analysis
- Data Preprocessing & Feature Engineering
- Model Training, Evaluation & Optimization
- Supervised & Unsupervised Learning
- Computer Vision (CNN, Object Detection)
- Data Visualization & Interpretation
- Natural Language Processing (NLP)
- Python Programming
- SQL & Database Management

Part-Time Experience

Skillzam | Belagavi |

Part-Time Tutor | jan'5 – march'27

Full-Time Experience

Insysteltech | Belagavi |

Intern | april'1 – currently working

Description:

- Developed an AI Tutor using RAG for accurate, context-aware responses
- Integrated LLM APIs (OpenRouter/GPT) for intelligent query handling
- Built a system to retrieve course content (100+ links) and combine with AI answers
- Enabled direct video/course link suggestions and subject-specific doubt solving
- Developed JSON/database handling
- Improved chatbot accuracy using retrieval + generation approach

Profile Summary

- AI & Data Science professional specializing in Machine Learning and Computer Vision.
- Developed AI-driven systems including wildlife monitoring and AI-based legal assistant platforms.
- Part-Time Tutor at Skillzam, mentoring students in AI, ML, and programming.
- Strong problem-solving mindset with focus on building scalable AI applications.

Achievements

- Hackathon Winner – SGBIT, Belagavi
- Built AI solutions with real-time deployment in Hackathon

Academic Projects

Evaluating the Socio-Economic Impact of AI-Driven Systems – B.E SGBIT College of Engineering, Belagavi.

- Wild Animal Detection Using YOLO

Developed an AI-driven wildlife monitoring system using YOLO object detection to identify animals through live camera feeds. The system triggers real-time email alerts (via Gmail) and sound notifications when wild animals are detected near villages, supporting conservation efforts, research initiatives, and forest safety surveillance.

- LegalEase – AI Legal Assistant

Created an AI-powered legal assistant leveraging a pretrained large language model, which was further refined using Indian legal datasets for enhanced accuracy. LegalEase offers clear explanations of legal concepts, generates structured legal documents, and responds to law-related inquiries through natural language processing (NLP) and retrieval-augmented generation. The optimized model improves case comprehension, legal reasoning, and provides trustworthy guidance tailored for students, professionals, and the general public.
